

How did WABCO
ever get this:

into this?

WABCO took the tested and use-proven transmitter and receiver from the CARRYPHONE® Portable 2-Way Radio, repositioned them, designed a new single unit battery, and fitted the whole thing into a small case—and Voilà! The new CARRYPHONE II radio. All of the best features of the original model are incorporated in the CARRYPHONE II radio: combination speaker-microphone, easy servicing, fully transistorized, high impact case, weather and dust proofing, and two-channel operation. Of course, the CARRYPHONE II radio has its own exclusive features: it's the *lightest* 1½ watt portable; the only alkaline battery powered portable; the portable with keyed, mistake-proof battery polarity protection. Some radio

manufacturers change electronic components for every model change, which makes servicing a nightmare. Not WABCO. By standardizing on the same transmitter and receiver units for both the CARRYPHONE I and II radios, we've *simplified servicing and parts stocking* problems. Of course, we couldn't do this unless we already had the best transmitter and receiver circuitry. Someday WABCO will bring out a better radio that will make the Dick Tracy wrist radio look sick, but until then there's the new CARRYPHONE II radio. For more information, contact your local WABCO representative or write to Ellis Jones, Railway Sales Manager, WABCO, Union Switch & Signal Division, Pittsburgh, Pennsylvania 15218.
